- 7. The function p(x) models the attendance at a museum exhibit from the time it opens to the time it closes 8 hours later.
  - a. Suppose the exhibit opens at 9:00 a.m. Estimate the time(s) during which the attendance was greater than 100 people. Round to the nearest half hour.

b. Explain what happened to the attendance around 1:00 p.m.

c. Determine the average rate of change in attendance between 10:00 a.m. and noon. Explain the meaning of your answer in terms of the problem situation.

8. A function and one of its factors is given. Use synthetic division to find the quotient, then find the rest of the zeros by factoring or using the quadratic formula.

a. 
$$f(x) = x^3 + 5x^2 - 9x - 45$$
;  $x + 5$ 

b. 
$$k(x) = x^3 - 12x - 16$$
